

Alexis Alejandro

📍 Pasadena, Texas ✉ alexisalejandro3400@gmail.com ☎ 281 906 2016

Summary

Computer Science graduate with a strong foundation in software development, data systems, and API integration. Hands-on experience integrating AI tools into data workflows, software development, and analytical problem-solving. Proficient in leveraging AI-assisted development (GitHub Copilot, Claude, ChatGPT) to accelerate coding, improve code quality, and automate repetitive tasks. Experienced building and querying relational databases, working with REST APIs, and applying Python and Java across projects. Familiar with Git-based workflows and collaborative development practices. Quick to learn new languages and frameworks.

Education

University of Houston December 2025
B.S. in Computer Science

Skills

Languages: C# , Python, Java, C++, SQL
Frameworks & Platforms: .NET, REST APIs, Git
DevOps & Automation: Docker, CI/CD concepts, YAML pipelines, GitHub Actions
Databases: SQL, Relational Database Design, Data Validation, Query Optimization
AI & Developer Tools: GitHub Copilot, Claude, ChatGPT, Microsoft Copilot, Prompt Engineering, LLM API Integration

Experience

Data Annotation Specialist 2026 – Present
Independent / Contract (Remote)

- Analyzed structured datasets to identify patterns, anomalies, and edge cases to improve ML model accuracy
- Performed systematic data validation and quality checks aligned with compliance-minded data practices
- Applied structured guidelines to detect inconsistencies and maintain dataset integrity across large-scale inputs

Manager Aug 2022 – Present
Chipotle, Pasadena, TX

- Maintained operational databases including inventory tracking, waste logs, and cost reporting with high accuracy
- Analyzed trends in inventory data to reduce waste and improve ordering precision using data-driven decision making
- Enforced consistent reporting processes and trained staff on documentation procedures

Projects

Public Library Database System

- Designed and implemented a normalized relational database in SQL to manage structured data across multiple entities
- Wrote complex queries for filtering, joining, and validating data
- Modeled real-world constraints including foreign keys, relationships, and referential integrity

Amazon Product Search Engine

- Built a search and ranking system in Python to process and analyze large datasets of product information
- Applied data processing and scoring algorithms to improve search result accuracy and relevance
- Designed backend logic with REST API-style interfaces for data retrieval and filtering
